

SYNTHETIC research row (live demo)

Research risk classification - not for clinical use.

This is **not** a medical report, hospital chart, or diagnosis. It is a made-up row that matches the **wisconsin_reduced** schema (six public FNA-style columns from the sklearn/UCI Wisconsin table). Do not read symptoms into it. Do not treat the name as a real person.

Demo labels only: Ada Example · date of birth 1991-04-02

In LAKSHYA: Paste a record → Upload text PDF (this file) or paste the HIGH block → Score this table → Generate locked PDF (name + DOB are labels only, not the password).

HIGH-range sample (copy these six lines)

```
mean perimeter: 122.8
mean concave points: 0.1471
worst radius: 25.38
worst perimeter: 184.6
worst area: 2019.0
worst concave points: 0.2654
```

LOW-range sample (optional second click)

```
mean perimeter: 75.0
mean concave points: 0.02
worst radius: 13.0
worst perimeter: 85.0
worst area: 520.0
worst concave points: 0.07
```

Table: wisconsin_reduced only. Other catalogs are not scored from this sheet.
